

Western Retro Wobble Kit

Adds variable height adjustment to your Western trap

This bolt-on wobble conversion kit from Western Retro Products now makes it possible for you to convert your Western trap into a continental / wobble trap. Adjust your Western trap for horizontal oscillation, turn on the wobble toggle switch and watch the unit oscillate the throwing arm up and down & side to side. Vertical height is varied between 1.5 & 3.5 meters. Easily converts from ATA to Wobble/Continental.

Many shooters consider this a more challenging and engaging practice for bird hunting. Get yours today!
